

Magento 2 Easymanage

How It Works?

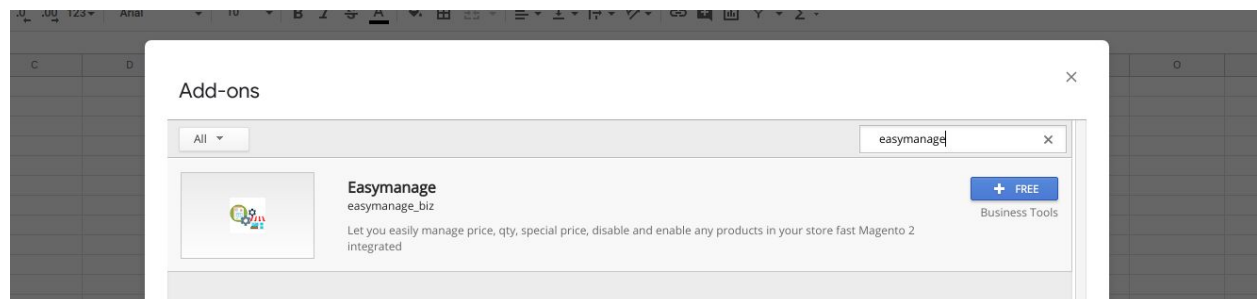

Basically it needs two extensions installed. One is for Google Spreadsheet (App script addon), another for Magento 2. App script addon update spreadsheet functionality and send-fetch data from-to web store, directly through Magento 2 REST API. Magento 2 extension its some kind of optimization for search, update products, also its keep any changed data as revisions and let fast restore back. System work only! if 2 extensions are installed.

Google Spreadsheet Add-on

Open Google Spreadsheet -> Menu -> Add-ons -> Get Add-ins

In search field type "Easymanage", find add-on and press "+ Free" button

Get Started

After successfully installed Magento 2 and Google Spreadsheet modules, you should see new menu item in your spreadsheet **"Add-ons" -> "E-Commerce"**. Click **"E-Commerce" -> "Manage shop"**

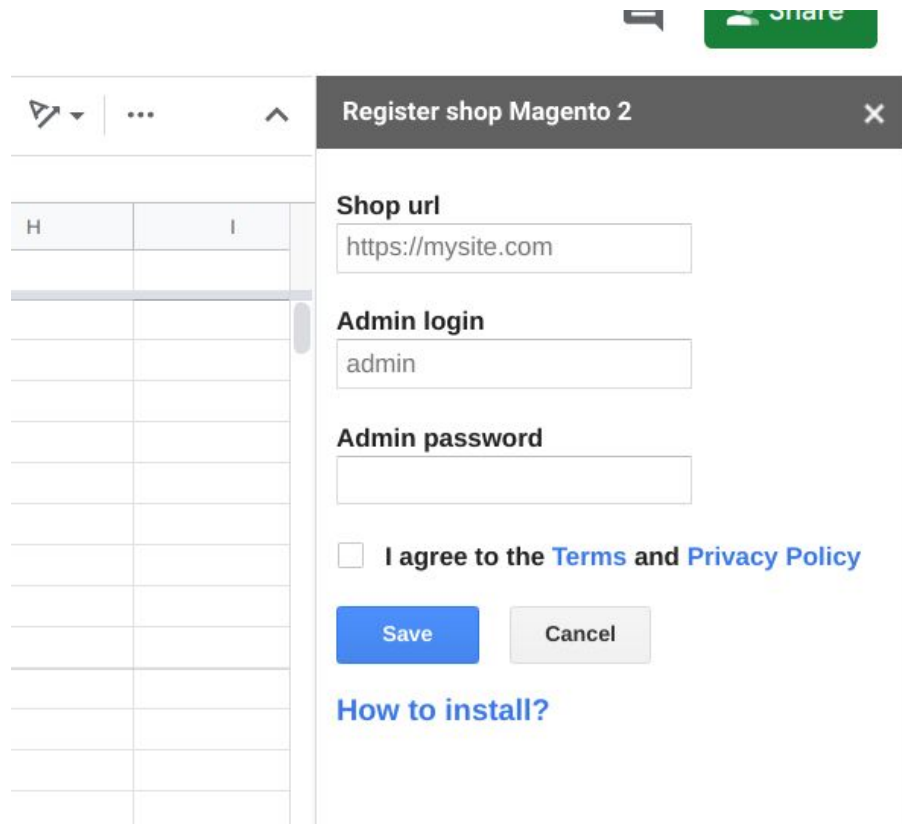

!!IMPORTANT – during first run app require access from yours account such as **Google Drive** etc... You have to allow all of them, that access let App script modify current spreadsheet. NOTE – we do not read, modify, create anything on yours drive.

Registration sidebar opened. Select **"Magento 2"**

You should see login screen, for authorization. Login and password are required for accessing Magento 2 REST API. We recommend to you create new admin user with ACL access "Magento_Catalog::catalog", "Magento_Catalog::store" or all and use it there.
